

Management of blood glucose levels $\geq 14\text{mmol/L}$ and blood ketone levels for patients on insulin pumps (CSII)

Check pump for occlusions, disconnection, battery failure, suspended delivery etc.

CHECK BLOOD KETONES

NOTE: If BK are $\geq 3.0\text{mmol/L}$ there is immediate risk of developing DKA.

If the child has nausea, vomiting, abdominal pain, headache or is unable to eat or drink advise them to attend local A&E ASAP.

If child has altered level of consciousness, laboured breathing or there are immediate concerns for safety call 999.
